

Web Application Security Testing with Burp Suite and DVWA

Introduction

This document summarizes web security testing using Burp Suite and DVWA, focusing on SQL Injection and HTTP request interception.

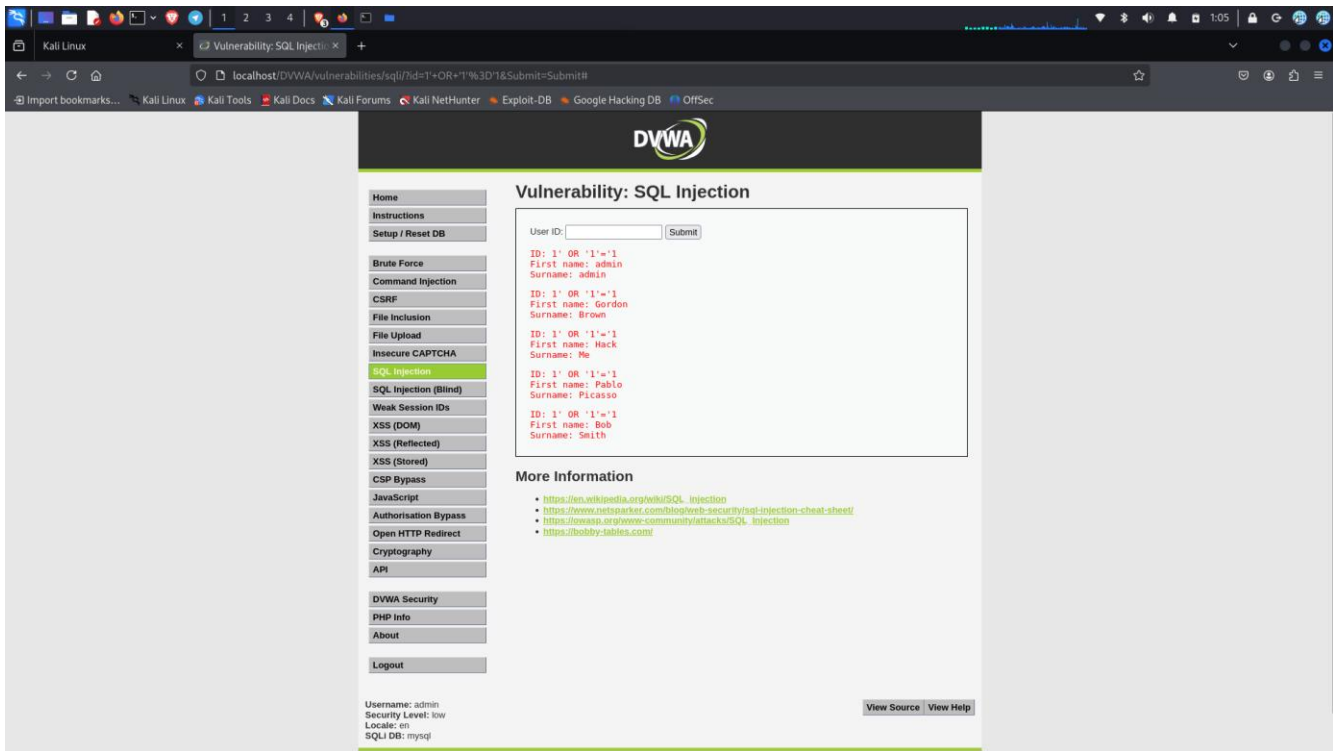

Tools Used

- Burp Suite Community Edition
- DVWA
- Kali Linux
- Firefox Web Browser

1. SQL Injection Testing in DVWA

1. Launch DVWA, set security to Low, and access SQL Injection.
1. Use SQL payload: ``1' OR '1'='1' --``.
1. Submitting this reveals user details, confirming vulnerability.

Screenshot Evidence

2. Capturing HTTP Requests with Burp Suite

1. Configure Burp Suite as a proxy and enable Intercept.
1. Capture login credentials during a test login attempt.
1. The intercepted request reveals plaintext credentials.

The screenshot displays the Burp Suite Community Edition v2024.10.3 interface. The top menu bar includes options like Burp, Project, Intruder, Repeater, View, and Help. Below the menu is a toolbar with buttons for Intercept on, Forward, and Drop all. The main workspace shows a table of captured requests. The selected request is a POST to http://10.0.10.0:80. The right sidebar contains the Inspector tab, which shows the request attributes, query parameters, body parameters, cookies, and headers.

Time	Type	Direction	Method	URL	Status code	Length
200523 29 Jan ...	HTTP	→ Request	POST	http://10.0.10.0:80/		

Request

Pretty Raw Hex

```

1 POST / HTTP/1.1
2 Host: r10.0.10.0:80
3 User-Agent: Mozilla/5.0 (X11; Linux x86_64; rv:128.0) Gecko/20100101 Firefox/128.0
4 Accept: */*
5 Accept-Language: en-US,en;q=0.5
6 Accept-Encoding: gzip, deflate, br
7 Content-Type: application/ocsp-request
8 Content-Length: 85
9 Connection: keep-alive
10 Priority: u=2
11 Pragma: no-cache
12 Cache-Control: no-cache
13 username=admin&password=password
14 OSOQ000M0K0+ia6iou4Bdo qqrkvv1T79peXAAr+D,ãAE|ð'{}

```
